

Syllabus of Module

8. Banking Products and Operations

Lecturer: Bc. Václav kučera

Module Annotation

Banking is a dynamically developing field, and the module is designed for students who want to understand it better. The main attention will be paid to individual investment instruments for the appreciation of free funds, the risks associated with them, as well as the history of the entire banking industry.

Module Topics:

- History of banking
- Institutions in the financial system, the role of the banking sector
- Banking products
- Security
- Selected payment instruments and banking operations
- Collective investing
- Investment in securities

Module Objectives

By completing the module, the student will acquire basic theoretical knowledge about banking and its history. Emphasis will be placed on individual banking products, their advantages and risks, basic investment rules and understanding of other investment instruments.
